

6520 16th ave NE,
Seattle, WA 98115

January 9, 2012

Dear Sir or Madam:

I am writing in response to the listing of available Google student internship positions. I am perusing a BS in Computer Engineering, and have have extensive experience designing and implementing software and algorithms. I have a passion for using and extending these skills, and thus I believe I would be a productive team member if given the opportunity.

I'm a Senior at the University of Washington, and will be graduating in December 2012. I have extensive personal and professional software engineering experience. This includes developing commercial CAD software and carver drivers, data processing software and numerous graphics projects such as my shader-metalanguage, planet renders and various 3D games. I've contracted with two companies, Provel and Sunburst where I gained significant professional experience. I have extensive experience in Java and Python, and am acquiring lots of C++ experience. I recently added Go to my language set for writing a game server and a multi-core fractal renderer. I can quickly learn what ever programming language best suits the job if its not one of the several I already know. The ability to determine what to learn, learn it quickly and apply it successfully is one of the most important skill given the state of the industry, and I have this. With over 10 years experience spanning more than a dozen programing languages and primarily motivated by my desire to learn and extend my skill set, I have developed both a powerful skill set, and the ability to adapt it to cover the needs of new projects. This makes me an excellent candidate for Product and Systems Development, or Test Engineering.

For additional detail, please see my résumé. I'm looking for a position at one of the Seattle locations, Kirkland or Fremont. Please feel free to contact me for any clarifications; you can call me at 206-432-7475 or email me at CraigM@CraigM.info. Thanks for your consideration.

Sincerely,

Craig Macomber
